# WHAT IS COLLECTX?

TSI's CollectX is a proprietary, cutting-edge predictive analytics model that drives higher recoveries by focusing efforts on accounts that have the highest statistical probability of liquidating.

CollectX utilizes state-of-the-art SAS technology, statistical techniques, and our unique set of collections data to produce a score indicating likelihood of payment for B2C collections and student loan servicing. CollectX dynamically updates the account scores on a weekly basis based on collection data accumulated over the course of the week. These scores are then used to rank accounts for collectability into 10 deciles.

- Collect more efficiently, resulting in lower collection fees by paying rates based on account risk.
- Because CollectX scores accounts based on collectability, TSI reduces compliance risk & massive fines by ensuring repeated attempts to contact consumers unable to pay do not occur.
- Armed with the ability to segment your portfolio, TSI is capable of developing campaigns designed to target at risk citizens for Hardship projects.
